

Smartphone Apps for Orienteering

We urge you to install the following 3 apps on your smartphone for use in orienteering. All are free and require minimal setup. The QR codes link to tutorial videos on how to setup and use the apps.

Incredibly useful app for conveying precise locations anywhere in the world using a 3-word address. Such addresses can be easily communicated via voice or text message, and the app provides direct links into navigation apps like Waze and Google Maps to obtain turn-by-turn directions to the corresponding locations. Can also be used in the field for GPS-assisted search & rescue.

App for recording your GPS track during your course which will automatically overlay on your map when you're done. Review and debriefing based on the recorded tracks is one of the best ways to train! Also allows us to track real-time runner locations during the event for safety and operational risk management.

App for administering and timing self-service permanent and semi-permanent courses, and every once in a while for timing at small live events. Allows you to punch and time your way around permanent courses using the phone's clock for timing, camera for QR code punching or NFC for "tap" punching, and GPS for route recording.

These and other videos about orienteering can be found on the Florida Orienteering YouTube channel [@FLO-Tube](https://www.youtube.com/@FLO-Tube)
